

Introduction

AB4M4 is an analog module with 4 configurable inputs and 4 outputs designed for mounting on a standard DIN-Rail with proprietary MTBus.

Each input can be set up via software in five different typologies: potentiometric, voltage input 0..10V or -10..+10V, current input 0..20mA or PT100.

The four analog outputs are both current and voltage.

The module indicates its state via four diagnostic leds.
